Tanks for Hot Dipping

25X1

1. As you know, [redacted] has, from time to time, used Hot-Dipping Compounds (Strippable Protective Compounds) of cellulose-acetate-butyrate formulation to protect items during burial. This material is Type II under Joint Army-Navy Specification JAN-C-149.

25X1

2. There is interest here as to whether [redacted] has tanks capable of properly heating the Hot-Dipping Compounds manufactured in this country. We are not asking for any work to be performed, but simply desire to know if such capabilities would exist if needed. If [redacted] does not possess tanks, would any be available from other sources?
